Profile Summary

Enthusiastic web developer actively seeking opportunities in the IT industry. Skilled in JavaScript, React, and essential web development tools, strengthened by a solid foundation from my Computer Science Degree. Proficient in creating dynamic, user-friendly web applications through personal projects and a web development bootcamp. Committed to delivering high-quality projects with creativity and dedication. Previous experience in database management at SIGMA, more information below. I am eager to fully transition into a web development role. Explore my web portfolio to see examples of my work. Fluent in English, Spanish, and Catalan.

Professional Experience

SQL Developer | SIGMA AIE 09/2021 – Present

- Manage and optimize databases using SQL, PLSQL, and Python.
- Design, develop, and maintain efficient database structures.
- Write and optimize complex queries for data extraction and manipulation.
- Automate tasks through script design and development, including working with ETL tools.
- Collaborate with cross-functional teams to provide technical solutions aligned with business objectives.

Achievements:

Developed a Python-based desktop application to automate processes involved in connecting with client universities's databases. Initiated the project independently, resulting in substantial time savings and improved efficiency. Integrated the application into the company workflow, enhancing productivity and client satisfaction.

Education and certifications

Computer Science | Universitat Autònoma de Barcelona

2018 -2021

Final Degree Project: Developed a decentralized exchange web application utilizing React and Bootstrap on the FrontEnd, and implementing Metamask, web3.js, Solidity, and Ethereum on the BackEnd. This project involved creating a user-friendly interface for seamless token trading.
